

iLLUMA-DRIVE MULTI-DWELLING APPLICATIONS

iLLUMA-Drive's platform is ideal for both new construction and existing multi-dwelling buildings

Whether you're a landlord looking to save costs while managing and controlling the energy and lighting usage of your renters/tenants, or if you are selling shared space and are looking for a competitive edge over other available real estate, iLLUMA-Drive's platform is the solution.

The addition of our lighting system helps considerably reduce the wiring costs and certified fixtures being powered by CENSE are 35-40% more efficient when compared to LED fixtures powered by a conventional AC system, therefore allowing the building management to shave considerable lighting costs. Linking the NEO Energy Gateway is an added benefit for potential renters guaranteeing they won't be left in the dark. This translates to a more desirable facility therefore potentially creating more revenue – benefits of our system can warrant higher rental rates or lower them if utilities are included in the rental price.

Start Somewhere

iLLUMA-DRIVE MULTI-DWELLING APPLICATIONS

Link our CENSE System to our NEO Energy Gateway, adding the battery storage you need, and your business will save money. Store energy when the rates are low and using during the high period. If there is ever a power cut, your lights stay on.

In summary, less expensive to install, less expensive to run and less expensive to maintain!
