

iLLUMA-DRIVE RESIDENTIAL APPLICATIONS

iLLUMA-Drive's platform is ideal for both new construction and to retrofit into existing properties

Our lighting system is a simple install for new construction and opens many more possibilities for lighting design due to the lower cost of wiring (Class 2 wiring). The system's efficiency allows the builder/homeowner to design a more intricate lighting system. Reduction in hydro/lighting consumption costs (35-40% savings VS standard AC system).

Whether your goal is to save electricity, improve your home security, automation control of your connected home or just simply enjoy the benefits of centralized automation control, all can be managed via T.H.E.A., iLLUMA-Drive's proprietary mobile application. Unlike many proprietary home automation apps, T.H.E.A. is being developed to be the one and only centralized control system you'll ever need. T.H.E.A. is Apple HomeKit, Google Home and Amazon Alexa ready.

iLLUMA-DRIVE RESIDENTIAL APPLICATIONS

Apple HomeKit

With HomeKit, now you can also use your iOS device to connect the products you use in your home – so you can privately and securely control them and make them work together.

Google Home / Amazon Alexa

Google Home and Amazon Alexa are powerful virtual assistants implemented in Android devices as well as Google Home speakers. They allow you to control your smart home devices using voice commands.

T.H.E.A.

T.H.E.A. truly brings IoT and Centralized Intelligent Control to the home and business automation forefront. Unlike many proprietary home automation apps, T.H.E.A. is being developed to be the one and only centralized control system you'll ever need.

Along with this, we've also programmed the system to allow customization and integration for your current and future automation control devices. So, you will no longer need separate dedicated applications to control the different components and fixtures in your home or business. Instead, through configuration and syncing, you can add current devices to our system.
